

Screenshot import --- hybrid on-device digitization

Screenshot of fertility-app chart
(e.g. Premom)

Route A (default) --- Classical CV
pure-TS OpenCV port
+ PaddleOCR PP-OCRv3 (ONNX)

Route B --- Manual calibration
column-scan digitizer
(WebPlotDigitizer-style)

Route C (baseline) --- Neural
Chart-Vision CNN
chart-vision-v2.onnx (16.6 MB)
[built, not shipped]

color segmentation,
axis OCR + RANSAC,
marker detection

user picks axis ticks,
column intensity scan

soft-argmax value
+ presence + scale head

cv2 ops reimplemented in TS
(no OpenCV.js / WASM);
only model asset = PaddleOCR ONNX.
Deterministic + recovers calendar table.

Per-day series
temp[35], lh[35]
+ BBT scale (C/F) + table

Editable table -> analyzeCycle()
(forest classifier)
